

COVID-19 VACCINE

COVID-19 vaccines are proven safe and effective, even for people with diabetes, hypertension and other chronic conditions.

Vaccines are free to everyone living in the U.S., no matter your immigration status. Your personal information will not be shared with the federal government.

You should get vaccinated even if you had COVID-19. The vaccine will provide additional protection and may help against variants of the virus.

For more information, call **1-833-422-4255** or visit **myturn.ca.gov**.

Vaccines do not inject the virus that causes COVID-19. They do not inject a chip or change your DNA. They help your body recognize and fight COVID-19.

Side effects can occur and are normal. Your arm may be sore a few days. Some people have a stronger reaction after a second shot or if they had COVID-19 before.

After vaccination, you still need to wear a mask, practice physical distancing and wash your hands often to protect those around you.
